EXECUTIVE PRODUCT OVERVIEW

BRANDVAULT AI -- Complete Product & Feature Guide

Protect Every Word. Preserve Every Identity. | Enterprise Brand Intelligence Platform

1. What is BrandVault AI in Simple English?

Plain English Definition

Think of BrandVault AI as an automated, super-intelligent Brand Inspector and Quality Guard for enterprises. Every company has strict rules: official product names, exact launch prices, legal disclaimers, forbidden words, approved colors, and protected logos. But marketing teams, creative agencies, and copywriters often publish mistakes -- wrong prices, unproven claims like 'world's fastest', old logos, or distorted translations.

BrandVault AI sits between your creative teams and the public. Before any ad, social media post, website copy, press release, or banner image goes live, BrandVault AI automatically scans every single word, price, claim, and pixel against your company's official brand guidelines. It highlights every error, shows the exact page where the official rule is written, provides a one-click compliant correction, and issues a tamper-proof digital Brand Passport once an authorized human approves it.

2. Why Do Businesses Urgently Need It?

The Multi-Million Dollar Problem

WITHOUT BRANDVAULT (Costly Mistakes)

[X] A writer types Rs. 69,999 instead of Rs. 79,999. Thousands buy befor

[X] An agency claims '10x faster than everyone' without proof, triggering

[X] Designers stretch logos or use off-brand colors, diluting brand prestig

[X] Ad translators change 'up to 18 hrs battery' to 'guaranteed 18 hrs', ca

[X] Scammers clone marketing text to sell fake products on fake websites

WITH BRANDVAULT (Bulletproof Governance)

[OK] Instant Price Contradiction check flags Rs. 69,999 and replaces with Rs. 79,9

[OK] ClaimDNA catches unproven claims and labels them 'UNSUPPORTED' befo

[OK] Visual DNA checks pixels, contrast, and logo geometry automatically.

[OK] Translation Guard ensures numbers, prices, and qualifiers are never altered.

[OK] Brand Fraud Intelligence spots fake websites, look-alike domains, and phishi

CORE PRINCIPLE: The Golden Rule of BrandVault AI

AGENTS ADVISE, HUMANS DECIDE: AI agents never have the power to approve content, publish ads, or alter company policy on their own. The AI acts as an infallible, tireless advisor that surfaces facts and evidence; the final governance decision is ALWAYS made by an authorized human reviewer.

WORKFLOW ARCHITECTURE

How BrandVault Works: The 7-Step Governance Journey

From raw marketing draft to a certified, tamper-evident Brand Passport

The 7 Steps Every Campaign Follows

Step-by-Step Flow

Step 1 Upload Guidelines

Admins upload PDF brand books and specification sheets. BrandVault extracts approved rules, facts, prices, and forbidden terms.

`/brand-dna`

Step 2 Submit Campaign Copy

Creators paste written marketing copy or upload promotional images and banner creatives into the three-panel workspace.

`/content-intelligence`

Step 3 Multi-Agent Inspection

Specialist AI agents run in parallel: Terminology Agent, ClaimDNA Agent, Product Truth Engine, and Visual DNA Inspector.

`/agent-control`

Step 4 Evidence-Backed Findings

Issues are flagged with severity (Critical, High, Medium) and linked to exact guideline citations, page numbers, and verbatim excerpts.

`/claim-dna`

Step 5 One-Click Fixes

Creators review findings and click 'Apply Correction' or use the AI Copy Studio to rewrite the text into 100% compliant copy.

`/copy-studio`

Step 6 Human Review Gate

Only an authorized human Reviewer or Administrator can approve, reject, or request revision. The decision is logged to the audit trail.

`/approval-hub`

Step 7 Brand Passport Issued

Upon approval, a cryptographic SHA-256 certificate (e.g. BV-2026-52ED8A) is issued. If a single letter changes, the passport becomes invalid.

`/brand-passport`

Understanding the 3 User Roles

Role-Based Access Control (RBAC)

Role	Who Holds It?	What They Can Do	What They Cannot Do
Creator	Copywriters, Agencies, Designers	Submit copy/images, view findings, apply 1-click fixes	Cannot approve campaigns or issue Passports
Reviewer	Brand Managers, Legal Counsel	Review evidence, request revisions, approve campaigns	Cannot edit master Brand DNA rules
Administrator	CMO, VP Brand, Governance Lead	Upload guidelines, confirm rules, manage API keys & users	Full access across the entire organization

FEATURE DEEP DIVE (PART 1)

The 15 Advanced Intelligence Engines & Features

Detailed explanation of core compliance, truth verification, and copy checking

1 1. Command Center & Governance Pulse

`/dashboard`

Executive dashboard providing a real-time health score (0 to 100) and complete brand governance overview.

How it works:

* Aggregates live statistics across all active campaigns, tracks claim
* verification distribution, and displays recent audit runs.

Why it matters:

[OK] Gives CMOs and leadership immediate visibility into brand health, active
[OK] risks, and campaign pipeline status.

2 2. Brand DNA Studio & Knowledge Confirmation

`/brand-dna`

The central source of truth for the company. Stores all approved rules, verified facts, and forbidden terminology.

How it works:

* Ingests official guideline PDFs, extracts policy items into structured
* databases, and presents them for administrator confirmation.

Why it matters:

[OK] Eliminates confusion across teams by maintaining a single, immutable digital
[OK] Brand Book that everyone is audited against.

3 3. Content Intelligence Workspace

`/content-intelligence`

Professional 3-panel editor where marketing drafts are analyzed and corrected in real time.

How it works:

* Panel 1 holds the content. Panel 2 lists all detected violations with
* severity badges. Panel 3 displays retrieved evidence and 1-click fixes.

Why it matters:

[OK] Allows writers to self-correct mistakes in seconds before submitting drafts
[OK] to legal or management.

4 4. ClaimDNA & The 5-Status Truth Model

`/claim-dna`

Rigorous verification engine for performance, comparative, and financial claims in marketing copy.

How it works:

* Checks claims against verified facts using a 5-tier status model: Supported,
* Unsupported, Contradicted, Outdated, or Needs Human Review.

Why it matters:

[OK] Prevents misleading advertising lawsuits by strictly refusing to guess when
[OK] supporting proof does not exist.

5 5. Product Truth Engine

`/brand-dna/products`

Hardware and product specification guardian that verifies prices, battery life, memory, processor speeds, and weight.

How it works:

* Parses structured product tables and checks copy for numbers and units (e.g.
* 16GB RAM vs 512GB SSD; 18 hours battery vs 24 hours).

Why it matters:

[OK] Stops accidental over-promising or specification errors on tech and
[OK] e-commerce product pages.

FEATURE DEEP DIVE (PART 2)

Visual Inspection, Multilingual Safety, and Governance

From pixel-level color analysis to cryptographic certification

6 6. Visual DNA & Asset Forensics

`/visual-dna & /visual-dna/forensics`

Direct pixel-level image auditor for marketing creatives, social banners, and advertisements.

How it works:

* Decodes image pixels to measure dominant colors, brand palette fidelity, WCAG
* accessibility contrast, and logo geometry (stretch/rotation).

Why it matters:

[OK] Catches stretched logos, outdated visual marks, unreadable text, and
[OK] forbidden background colors automatically.

7 7. Translation Guard

`/translation-guard`

Multilingual compliance engine for global marketing campaigns running in multiple languages.

How it works:

* Normalizes scripts and numerals across Hindi, Tamil, French, German, Spanish,
* Japanese, and checks that claims are not exaggerated.

Why it matters:

[OK] Ensures global campaigns communicate the exact same legal promises regardless
[OK] of the language spoken.

8 8. Approval Hub (Human Governance Gate)

`/approval-hub`

The authoritative decision point where certified reviewers make the final go/no-go determination.

How it works:

* Presents the full audit report, evidence cards, and reviewer notes. Only
* authenticated Reviewers or Admins can record an approval.

Why it matters:

[OK] Guarantees legal accountability: every approval records who reviewed it,
[OK] when, and with what mandatory rationale comment.

9 9. Brand Passport & Fingerprint Verification

`/brand-passport & /brand-passport/verify`

Cryptographic proof of brand compliance, generating a unique SHA-256 digital passport for every approved campaign.

How it works:

* Computes a tamper-evident hash of the approved text. The verification tool
* allows anyone to paste published copy to prove it was untouched.

Why it matters:

[OK] Provides audit-proof evidence for legal compliance and client contracts,
[OK] proving content was approved before release.

10 10. Brand Memory & Continuous Learning

`/brand-memory`

Continuous intelligence engine that learns from past corrections to make future governance faster and smarter.

How it works:

* Detects recurring mistakes and frequent writer corrections, automatically
* proposing new terminology rules for administrators to add.

Why it matters:

[OK] Turns daily review feedback into permanent company knowledge, preventing the
[OK] same mistakes from recurring.

ADVANCED CAPABILITIES

AI Rewriting, Digital Twins, Risk Radar & Fraud Shield

Proactive brand defense, entity graphs, and AI assistance

11 11. AI Copy Studio (Grounded Rewriter)

`/copy-studio`

Generative AI assistant that rewrites flagged marketing copy into compliant, polished prose.

How it works:

* Uses Groq LLMs grounded strictly in the company's approved Brand DNA; falls
* back to deterministic rule rewrites when offline.

Why it matters:

[OK] Saves creators hours of rewriting time by instantly offering a
[OK] ready-to-publish, compliant alternative.

12 12. Brand Assistant (Digital Twin Q&A)

`/assistant`

Conversational AI assistant that answers questions about company policies, approved specs, and tone.

How it works:

* Answers only from approved Brand DNA records, always citing source documents.
* If information is not approved, it honestly says so.

Why it matters:

[OK] Gives writers and agency partners an instant 24/7 brand expert so they never
[OK] have to guess company rules.

13 13. Brand Fraud & Counterfeit Shield

`/risk-radar/fraud`

Proactive security scanner that analyzes suspicious links, promotional text, or screenshots for brand impersonation.

How it works:

* Detects look-alike domains (typosquats), unapproved low prices, copied
* marketing phrases, and phishing triggers.

Why it matters:

[OK] Protects customers from being scammed by fraudulent websites masquerading
[OK] under the company's brand name.

14 14. Interactive Knowledge Graph

`/knowledge-graph`

Dynamic visual network map showing how brands, products, guidelines, rules, findings, and passports interconnect.

How it works:

* Renders SVG entity nodes in 9 distinct color categories with click-to-expand
* exploration and deep link navigation.

Why it matters:

[OK] Helps administrators understand brand complexity and audit how individual
[OK] rules impact multiple marketing campaigns.

15 15. Campaign Launch Readiness (12-Point Checklist)

`/approval-hub/readiness`

Comprehensive pre-flight checklist that verifies all 12 compliance dimensions before a campaign launch.

How it works:

* Validates terminology, claim statuses, product truth, translation guard,
* visual assets, disclaimers, and approval expiration.

Why it matters:

[OK] Acts as the final flight controller preventing high-risk campaigns from
[OK] reaching production.

PRACTICAL DEMONSTRATION & PRINCIPLES

Real-World Test Case & Non-Negotiable System Laws

Concrete proof of how BrandVault AI catches real marketing errors

The NovaBook AI Laptop Launch Test Case

Real-World Example

Here is the exact test case run during live demonstrations of BrandVault AI:

DRAFT COPY: Submitted Marketing Copy Draft

"Introducing the world's fastest AI laptop! 10x faster than every competitor.
Now available for only Rs. 69,999!"

Element Flagged	Finding Category	Integrity Status	Official Brand Truth	System Correction
Rs. 69,999	Pricing Conflict	CONTRADICTED	Approved launch price: Rs. 79,999 (Master Sheet v2.4)	Replace with approved Rs. 79,999
world's fastest	Superlative Claim	UNSUPPORTED	No lab benchmark proof in approved guidelines	Remove superlative claim
10x faster than competitors	Comparative Claim	UNSUPPORTED	No verified competitor test data stored	Remove ungrounded claim
Product Naming	Terminology	SUPPORTED	'NovaBook AI Pro 16' is approved	Keep official product name

The 4 Non-Negotiable BrandVault Laws

Architectural Commitments

Principle	System Law	Why It Matters
1. Humans Decide	No AI agent may ever approve, reject, or publish content on its own.	Eliminates rogue AI actions; preserves human legal accountability.
2. Deterministic First	Prices, calculations, colors, and hashes use exact math, never fuzzy AI guesses.	A price of Rs. 79,999 is checked with exact numbers, not probabilistic text.
3. Zero Fake Data	Every citation links to a real document and page. Absence = UNSUPPORTED.	The system never invents missing facts to satisfy a user request.
4. Strict Tenant Isolation	Workspaces, brands, and documents are 100% isolated by organization ID.	NOVATECH data can NEVER be retrieved or seen in VORTEXA workspaces.

GETTING STARTED: Ready to Protect Your Brand?
