BV

BrandVault AI

Step-by-step user guide

How to use every part of the product, with real example inputs, the real results BrandVault gave, and the reason behind each result. Written in simple English.

Website	https://brandvault-ai-1.onrender.com
Example brand	NOVA TECH (demo workspace) — product NovaBook AI Pro 16
Example files	The `inputs/` folder of the project (893 files, 14 folders)
How results were made	Every example below was run through the real product. Results are copied exactly. AI was switched off so the rule engine's results are repeatable; with an AI key, BrandVault can add extra AI suggestions (marked “AI”).
Team	Deal Dynamos

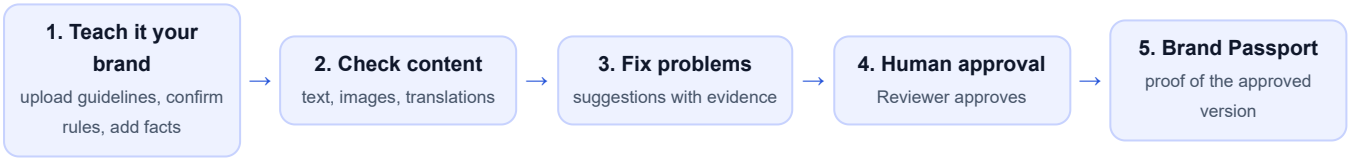

1. What BrandVault is, and why companies use it

In one line: BrandVault checks a company's marketing (text, images, banners, translations) against the company's own brand rules and approved facts *before* it is published, shows the evidence for every problem, and keeps a record of who approved what.

The problems it solves

Problem in real companies	Example	What BrandVault does
Wrong prices or specs get published	An ad says ₹69,999 when the approved price is ₹79,999	Checks every price and number against approved facts and flags it as **Contradicted**
Risky claims that can bring legal trouble	“World's fastest laptop”, “3x faster than Apple”	Flags superlatives and comparisons that have no proof
Off-brand tone and banned words	“Cheap”, “HUGE SALE!!!”	Flags banned terms and hype and suggests brand-safe wording
Old offers keep being used	An expired pre-order bonus still in an ad	Marks the claim **Outdated**
Translations change the meaning	The Hindi version shows a different price	Compares every translation with the source
Approved content is edited later	A price changed after approval	Brand Passport proves whether text is exactly what was approved
Fake websites copy the brand	n0vatech.shop selling at a fake price	Fraud Intelligence and a daily look-alike domain watch
Slow manual review	Hundreds of posts to check by hand	Bulk check, Fix all and Bulk review save hours

How it works (the big picture)

Important rule: AI never approves anything. Only a person with the Reviewer or Administrator role can approve. BrandVault never invents a result: if something can't be checked, it says so.

2. Before you start

2.1 Roles (who can do what)

Role	Can do	Cannot do
Creator	Check copy, images and translations; use Fix all; send work for review	Approve or reject; change brand rules
Reviewer	Everything a Creator can, plus approve, reject or request revision	Change brand rules or team settings
Administrator	Everything, plus upload guidelines, confirm rules, manage the team, security and data	—

2.2 Sign in or create an account

1. Open **https://brandvault-ai-1.onrender.com** and click **Sign in**.
2. **To try the demo:** on the sign-in page click **Admin**, **Reviewer** or **Creator** to fill in a demo account, then click **Sign in**.
3. **For your company:** click **Create an account**, choose **My company**, type your company name, your name, work email and a password (10+ characters, letters and numbers). You become the Administrator of a new, private workspace.
4. **Joining a team:** open the invitation link your Administrator sent you; the email and role are filled in for you.
5. If two-step sign-in is on, type the 6-digit code from your authenticator app when asked.

Why you get this result

- A new company workspace starts empty, so the Setup Guide will show 0% until you add your brand (next section).
- Five wrong passwords in a row lock the account for 15 minutes; an Administrator can unlock it in Settings → Team.

2.3 How to read any result

You see	Meaning
Health score 0–100	100 = no problems. Each problem lowers it; critical problems lower it most.
CRITICAL	Must fix before publishing (wrong price, banned term, unproven claim).
WARNING	Should fix (tone, low contrast, missing disclaimer).
SUGGESTION	Optional improvement, often from the AI.
Supported Contradicted Unsupported Outdated	Claim results: matches an approved fact / goes against one / has no proof / refers to something expired.
Evidence	The guideline document and page the rule comes from, e.g. “NOVA_TECH_Brand_Governance_2026.pdf (Page 3)”.
RULES / **AI** tag	Found by the fixed rule engine (always the same) or suggested by the AI (needs a person to judge).

3. Step 1 — Teach BrandVault your brand (Brand DNA Studio)

BrandVault can only check what it knows. This step gives it your rules, prices and wording. **Administrator only.**

1. Open **Setup Guide** in the left menu. It shows 8 steps and how many are done. Follow it in order.
2. Open **Brand DNA Studio** → click **Upload guideline** → choose your brand guideline file. Accepted: PDF, Word (.docx), HTML, Markdown/text, and CSV/Excel price lists.
3. BrandVault reads the file and lists sentences that look like rules (with words like *must*, *prohibited*, *price*) under **Brand Rules** as **Awaiting confirmation**.
4. Read each extracted rule and click **Confirm Rule** for the correct ones. Only confirmed rules are used in checks.
5. Under **Approved Facts & Pricing**, make sure your real price and specs are there (e.g. Launch Price ₹79,999; 45 TOPS; up to 18 hours battery; 2-year warranty). A CSV/Excel price list adds price facts for you to approve in Product Truth.
6. Under **Approved Terminology**, add banned words and their preferred replacements (e.g. “cheap” → “exceptional value”).
7. To replace an old guideline, choose it in the **New document** dropdown before uploading; the old one is kept as history.
8. To remove a wrong document, open **Source Documents** and click **Delete** on its card (Administrators only).

EXAMPLE INPUT

Example file: `inputs/05_brand_dna_guidelines/ (70 files) or demo_files/NOVA_TECH_Brand_Guidelines_2026_v2.docx`

```
A brand guideline document (Word, PDF, Markdown…) — for instance NOVA_TECH_Brand_Guidelines_2026_v2.docx
```

RESULT

The document appears under **Source Documents** with status **PROCESSED**, its rules appear as **Awaiting confirmation**, and its text becomes searchable evidence for every later check.

Why you get this result

- Rules wait for confirmation because a computer reading a document can pick up the wrong sentence; a person must say “yes, this is a rule”.
- Deleting a document removes its text and its *unconfirmed* rules, but keeps rules you already confirmed (you approved those yourself).

4. Step 2 — Check marketing text (Content Intelligence)

1. Open **Content Intelligence**.
2. Type a **Campaign Title** and paste your text into **Marketing Copy**.
3. Click **Run AI Analysis**. In a few seconds you see the **Health score**, a list of **Findings**, and the **Evidence & Source** for the selected finding.
4. Click a finding to see the exact rule and the guideline page it comes from.
5. Click **Apply fix** on one finding, or **Fix all** to apply every automatic fix at once (next page).
6. When it looks right, click **Submit for review**.

Example A — an ad with many problems

INPUT (PASTED TEXT)

Example file: `inputs/01_content_intelligence/r50_festival_ad.txt`

```
Diwali offer!! World's fastest AI laptop at ₹69,999 with free NovaSleeve pre-order bonus. Cheaper than ever, 3x faster than Apple.
```

RESULT — HEALTH SCORE 5/100, 6 FINDINGS

Level	Type	What was flagged	Why (reason)	Suggested fix
CRITICAL	Terminology	**"World's fastest"**	Unsubstantiated superlative that risks regulatory scrutiny and breaches advertising standards.	exceptionally high-performance / benchmark-leading
CRITICAL	Terminology	**"Cheap"**	Brand tone mandates an enterprise, high-craft aesthetic; 'cheap' degrades brand equity.	exceptional enterprise value / highly accessible
WARNING	Tone & Voice	**"Off-brand tone: 2 exclamation marks"**	The brand tone guidelines require a calm, understated, and precise tone. Exclamation marks, capitals used for shouting and hype slang reduce enterprise credibility.	Replace enthusiastic exclamation points with confident, period-punctuated declarative statements.
CRITICAL	Pricing	**"₹69,999"**	Promotional price '₹69,999' conflicts directly with the approved launch price of ₹79,999.	₹79,999
CRITICAL	Promotional Claim	**"World's fastest AI laptop"**	Superlative speed claim without an audited third-party benchmark citation. Guidelines prohibit unsubstantiated absolute performance claims.	high-performance AI laptop (45 TOPS NPU with sustained 3.8 GHz clock speed)
CRITICAL	Promotional Claim	**"3x faster than Apple"**	Broad comparative competitor claim without cited benchmark testing parameters or audited disclosure.	demonstrating class-leading efficiency across ISO-289 standard benchmarks

Claims checked:

Claim found	Result	Why	Evidence
Product price: ₹69,999	Contradicted	Explicitly contradicts approved pricing record ₹79,999.	NOVA_TECH_Brand_Governance_2026.pdf (Page 3)
World's fastest AI laptop	Unsupported	Guideline requires independent benchmark verification, which is not present in approved evidence.	NOVA_TECH_Brand_Governance_2026.pdf (Page 7)
3x faster than Apple	Unsupported	No verifiable comparison dataset exists for 'every competitor' in approved evidence.	NOVA_TECH_Brand_Governance_2026.pdf (Page 7)
Referencing: Launch Pre-Order Bonus Offer	Outdated	The approved record for 'Launch Pre-Order Bonus Offer' expired on 2024-12-31 and was superseded: Promotion concluded. No active pre-order bonus exists for the 2026 campaign..	Q4 2024 Launch Promotion Memo (DocRef #PR-2024-11)

Why you get this result

- **₹69,999** is flagged because the approved launch price (an approved fact) is ₹79,999.
- **"World's fastest"** and **"Cheap"** are banned terms in the brand rules.
- **"3x faster than Apple"** is a comparison with no audited benchmark, so it is *Unsupported* and risky to publish.
- The **free NovaSleeve pre-order bonus** ended in 2024, so the claim is *Outdated*.
- **Two exclamation marks** break the calm brand tone (a warning, not critical).
- With five critical problems the score falls to 5.

Example B — clean text

INPUT

Example file: `inputs/01_content_intelligence/r04_product_page.txt`

```
NovaSleeve protective case, ₹2,499, sold separately.
```

RESULT — HEALTH SCORE 100/100

No findings: the text is compliant.

Why you get this result

- ₹2,499 is in a sentence about an accessory (a protective case), so it is not mistaken for the laptop's price.
- There are no banned words, unproven claims or tone problems.

4.1 Fix all — repair everything fixable in one click

1. After an analysis, click **Fix all** above the Findings list.
2. BrandVault replaces every flagged phrase that has a word-for-word fix, then checks the text again (one new version).
3. A message tells you how many fixes were applied and which problems need a manual edit.

INPUT (EXAMPLE A ABOVE)

```
Diwali offer!! World's fastest AI laptop at ₹69,999 with free NovaSleeve pre-order bonus. Cheaper than ever, 3x faster than Apple.
```

RESULT — SCORE 5 → 65

```
Diwali offer!! High-performance AI laptop (45 TOPS NPU with sustained 3.8 GHz clock speed) at ₹79,999 with free NovaSleeve pre-order bonus. Cheaper than ever, demonstrating class-leading efficiency across ISO-289 standard benchmarks.
```

Applied:

Level	Replaced	With
CRITICAL	"World's fastest AI laptop"	"high-performance AI laptop (45 TOPS NPU with sustained 3.8 GHz clock speed)"
CRITICAL	"3x faster than Apple"	"demonstrating class-leading efficiency across ISO-289 standard benchmarks"
CRITICAL	"₹69,999"	"₹79,999"

Left for you to edit:

Type	Text	Reason
Terminology	"Cheap"	"Cheap" is part of a longer word here; edit it by hand
Tone & Voice	"Off-brand tone: 2 exclamation marks"	describes the whole text; edit it by hand

Why you get this result

- Only suggestions that are real replacement words are applied automatically. Advice such as “use calmer punctuation” needs a person.
- A fix never changes part of another word: “Cheap” inside “Cheaper” is left for you to rewrite.
- The speed claim is rewritten with NOVA TECH's *own* approved specification (45 TOPS …), never another company's figures.
- The expired NovaSleeve offer has no replacement wording, so remove that phrase yourself.

5. Check single claims (ClaimDNA)

Every number and promise in your text is checked against your approved facts. You see this in Content Intelligence (“Claims checked”) and in more detail on the **ClaimDNA** page.

INPUT 1

Example file: `inputs/02_claim_dna/claim_007_price.txt`

```
Now available at ₹69,999.
```

RESULT

Claim found	Result	Why	Evidence
Product price: ₹69,999	Contradicted	Explicitly contradicts approved pricing record ₹79,999.	NOVA_TECH_Brand_Governance_2026.pdf (Page 3)

INPUT 2

Example file: `inputs/02_claim_dna/claim_001_price.txt`

```
The NovaBook AI Pro 16 costs ₹79,999.
```

RESULT

Claim found	Result	Why	Evidence
Product price: ₹79,999	Supported	Matches approved launch price ₹79,999.	NOVA_TECH_Brand_Governance_2026.pdf (Page 3)

Why you get this result

- The price is compared with the approved fact “NovaBook AI Pro 16 Launch Price = ₹79,999”, and the evidence names the page of the pricing policy.
- Battery hours, TOPS and warranty years are checked the same way. Vague claims such as “all-day battery” go to *Needs Human Review*.

6. Check banners, PDFs and videos (Creative Inspection)

1. Open **Visual DNA → Creative Inspection**.
2. Click **Choose a creative** and pick an image (PNG, JPG, WebP), a PDF deck or a short video.
3. BrandVault reads the text inside it (OCR), fixes common reading mistakes, and checks that text like any copy. It also looks for your registered logo.
4. Each finding shows where on the image the text was found.

INPUT

Example file: `inputs/03_creative_inspection/banner_01.jpg`

```
Banner image 1080×1080 (JPG)
```

RESULT — SCORE 65/100

Text read from the banner:

```
NovaBook AI Pro 16
Claim your free NovaSleeve pre-order bonus
today.
Price drop alert:  ₹74,999 this weekend.
```

Reading corrections made automatically:

- “NovaBookAIPro16” → “NovaBook AI Pro 16” (words run together by OCR)
- “74,999” → “₹74,999” (currency symbol not recognised by OCR)

Level	Type	What was flagged	Why (reason)	Suggested fix
CRITICAL	Pricing	**“₹74,999”**	Promotional price '₹74,999' conflicts directly with the approved launch price of ₹79,999.	

Why you get this result

- The banner says ₹74,999 but the approved price is ₹79,999.
- OCR read “NovaBookAIPro16” and a price without the ₹ sign; BrandVault repaired both using your brand's own words, so the price could be checked.
- Reading text uses a lot of memory, so it runs one image at a time and takes around 10 seconds. Very large images may be refused on the free server with a clear message.

7. Check colours and contrast (Visual DNA)

1. Open **Visual DNA** → **Upload image**.
2. BrandVault measures the colours and the contrast of the image.
3. Colour is judged against a confirmed palette rule (for NOVA TECH: monochrome — black, white and greys). Without such a rule only contrast is checked.

INPUT 1

Example file: `inputs/04_visual_dna/visual_02_colour_high.webp`

```
A bright green and white layout
```

RESULT — SCORE 80/100 (COLOUR PIXELS 78%, CONTRAST 0.343)

Level	Type	What was flagged	Why (reason)	Suggested fix
WARNING	Visual	**“77% of sampled pixels are chromatic (non-grayscale)”**	NOVA TECH's confirmed palette rule requires monochrome. Measured colour content exceeds the monochrome threshold.	Restrict the asset to approved monochrome values (e.g. #0A0A0A, #171717, #FFFFFF).

INPUT 2

Example file: `inputs/04_visual_dna/visual_01_mono_low.jpg`

```
A grey, low-contrast layout
```

RESULT — SCORE 90/100 (CONTRAST 0.094)

Level	Type	What was flagged	Why (reason)	Suggested fix
WARNING	Accessibility	**“Low luminance contrast (measured 0.094)”**	Low measured luminance spread may fail accessibility contrast guidance.	Increase contrast between foreground text and background.

Why you get this result

- Image 1: 78% of its pixels are coloured, but the brand palette is monochrome.
- Image 2: everything is mid-grey, so text would be hard to read (low contrast is an accessibility problem).
- Visual DNA does not read the words in the image; for that, use Creative Inspection (section 6).

8. Check translations (Translation Guard)

1. Open **Translation Guard**.
2. Paste the English source, then add each translation. Set the label to the language code: hi, fr, es, de or ta.
3. Click **Run Translation Guard**. Each language gets *Consistent* or *Needs revision* with the reason.

INPUT

Example file: `inputs/06_translation_guard/tg_07_price_hi_number_changed.json`

```
Source: The NovaBook AI Pro 16 is priced at ₹79,999.
hi: NovaBook AI Pro 16 की कीमत ₹69,999 है।
fr: Le NovaBook AI Pro 16 est proposé à ₹79,999.
```

RESULT — OVERALL: NEEDS REVISION

Language	Verdict	Reason
hi	Needs revision	Changed price: ₹79,999 → ₹69,999 — The translation states a different price than the source. Price ₹69,999 contradicts approved price — Approved fact “NovaBook AI Pro 16 Launch Price” is ₹79,999.
fr	Consistent	Same meaning, numbers and product name as the source

Why you get this result

- The Hindi text says ₹69,999 while the English source says ₹79,999 — a changed number.
- ₹69,999 also contradicts the approved price fact.
- The French text keeps the same price and product name, so it is consistent.
- It also catches dropped “up to”, a dropped “no”, and a changed product name.

9. Rewrite off-brand copy (AI Copy Studio)

1. Open **AI Copy Studio**.
2. Paste the text and click **Generate Compliant Copy**.
3. You get a brand-safe version and a list of every change with its reason. Copy it back into Content Intelligence to check it.

INPUT

Example file: `inputs/07_copy_studio/rewrite_01_whatsapp.txt`

```
Hi! This Independence Day, take it home for just ₹72,999. HUGE SALE — TODAY ONLY Designed for consultants who need quiet, dependable performance. The display is factory-calibrated for accurate colour.
```

RESULT (RULE-BASED REWRITE)

```
Hi. This Independence Day, take it home for just ₹79,999. Huge Sale — Today Only Designed for consultants who need quiet, dependable performance. The display is factory-calibrated for accurate colour.
```

- “₹72,999” → “₹79,999”: Corrected to the approved price (Pricing Policy Master Document 2026 (DocRef #P-2026)).
- “hype, capitals or exclamation marks” → “calm, measured wording”: Brand voice requires a calm, understated tone.

Why you get this result

- ₹72,999 is not the approved price, so it becomes ₹79,999.
- “Hi!” and “HUGE SALE — TODAY ONLY” are hype; capitals and exclamation marks are calmed down.
- With an AI key the rewrite is smoother; without one, BrandVault uses safe rule-based edits and never invents facts.

10. Ask questions about your brand (Brand Assistant)

1. Open **Brand Assistant**.
2. Type a question in plain English, e.g. “What is the launch price?”
3. The answer comes only from your approved brand data, with the evidence.

QUESTION 1

Example file: `inputs/08_brand_assistant/q01.txt`

```
What is the launch price of the NovaBook AI Pro 16? Please cite the source.
```

ANSWER

```
Approved pricing on record:
• NovaBook AI Pro 16 Launch Price: ₹79,999
```

QUESTION 2

Example file: `inputs/08_brand_assistant/q41.txt`

```
Quick check: What is the CEO's personal phone number?
```

ANSWER

```
I can only answer from your organisation's approved brand data (guidelines, rules, approved facts and
terminology), and I couldn't find anything about that. Try asking about pricing, approved claims, brand rules,
prohibited terms, or your brand voice.
```

Why you get this result

- Question 1 is answered from the approved fact “Launch Price = ₹79,999”.
- Question 2 is not in the brand data, so the assistant says so instead of guessing. It never makes up an answer.

11. Review and approve (Approval Hub)

1. A Creator clicks **Submit for review** in Content Intelligence.
2. A Reviewer or Administrator opens **Approval Hub**, selects the campaign and reads the findings and evidence.
3. The Reviewer writes a comment and clicks **Approve & Issue Passport**, **Request Revision** or **Reject**.
4. Approving issues a **Brand Passport**: a record of exactly which text and version was approved, by whom and when.
5. If the text changed after the Reviewer opened it, the decision is refused and they must reload (version lock).

Why you get this result

- Only people can approve; AI has no permission to approve.
- The passport stores a fingerprint of the approved text, so any later change can be detected (section 14).

12. Check many pieces at once (Bulk check)

1. Open **Content Intelligence → Bulk check**.
2. Paste several pieces separated by a line containing only `---`, or upload CSV, Excel, Word, PDF or text files (up to 200 pieces). In CSV/Excel, use a column named Content, Copy or Text (optional Title and Department).
3. Click **Check N pieces**. A progress bar shows how many are done; you can leave the page.
4. See each piece's score and critical findings, open any one, or click **Export CSV**.

INPUT (PASTED)

```
Diwali offer!! World's fastest AI laptop at ₹69,999 with free NovaSleeve pre-order bonus. Cheaper than ever, 3x faster than Apple.
---
NovaSleeve protective case, ₹2,499, sold separately.
```

RESULT — 2 CHECKED, 1 CLEAN, 1 WITH CRITICAL PROBLEMS, AVERAGE SCORE 52

Piece	Score	Critical	Warnings
Diwali	5	5	1
Product page	100	0	0

Why you get this result

- Each piece is checked exactly like a single check; the results are the same as Example A and B in section 4.

13. Decide on many reviews at once (Bulk review)

1. Open **Approval Hub** → **Bulk review** (Reviewer or Administrator).
2. Filter by *To review*, search by title or author, and sort (e.g. lowest score first).
3. Tick the campaigns, or click **Select all without critical findings on this page**.
4. Write one comment and click **Approve**, **Request revision** or **Reject**.
5. Click **Export all (CSV)** for a report of every review.

Why you get this result

- Anything with an open critical finding is skipped from bulk approval with the reason — it needs a careful look on its own.
- Each decision is still saved separately under your name, and anything changed since it was listed is skipped.

14. Prove content is the approved version (Brand Passport → Campaign Integrity)

1. Open **Brand Passport** → **Campaign Integrity** (the verify page).
2. Paste the text you found (on a website, in an ad, from an agency) or attach a file, and click **Verify integrity**.

INPUT 1 (EXACTLY AS APPROVED)

Example file: `inputs/13_brand_passport_verify/verify_01_exact_approved.txt`

```
Meet NovaBook AI Pro 16. The NovaCore N10 AI Engine delivers up to 45 TOPS sustained AI processing performance, with up to 18 hours mixed productivity workload on a single charge. Available at ₹79,999 with a 2-Year On-Site Limited Hardware Warranty.
```

RESULT: VERIFIED MATCH

Identical to the approved campaign in passport BV-2026-54B83B.

INPUT 2 (PRICE EDITED)

Example file: `inputs/13_brand_passport_verify/verify_02_price_changed.txt`

```
Meet NovaBook AI Pro 16. The NovaCore N10 AI Engine delivers up to 45 TOPS sustained AI processing performance, with up to 18 hours mixed productivity workload on a single charge. Available at ₹69,999 with a 2-Year On-Site Limited Hardware Warranty.
```

RESULT: MODIFIED AFTER APPROVAL

98% similar to the approved campaign in passport BV-2026-54B83B, but the wording differs. The edit has not been approved.

Why you get this result

- Input 1 has exactly the same fingerprint as the text approved in the passport.
- Input 2 is 98% the same but the price was changed after approval, so it is not trusted.

15. Find copied or repeated campaigns (Similarity)

1. Open **Content Intelligence** → **Similarity detector**.
2. Paste text and click **Find similar content** to see which existing campaigns it matches, and which sentences are shared.

INPUT

Example file: `inputs/14_similarity/sim_01_near_copy.txt`

```
Introducing the world's fastest AI laptop! 10x faster than every competitor. Now only ₹69,999!
```

RESULT: EXACT DUPLICATE OF “NOVABOOK AI PRO 16 — LAUNCH ANNOUNCEMENT” (100% SIMILAR, STATUS REVISION REQUESTED)

Matching sentences are listed side by side.

Why you get this result

- The text is word-for-word the same as an existing campaign that a reviewer already sent back for revision — so it should not be reused as is.

16. Check channel rules before publishing (Publishing Gate)

1. Open **Approval Hub** → **Publishing gate**, or call the Check API.
2. Choose the channels (Instagram, LinkedIn, X, Google Ads…), and give the image size if there is one.
3. Click **Check channels & disclaimers**. BrandVault checks length limits, image shapes and required disclaimers.

INPUT

Example file: `inputs/11_channel_check/channel_03_google_ads.json`

```
NovaBook AI Pro 16 — ₹79,999 — The NovaCore N10 AI Engine delivers 45 TOPS of sustained AI performance.   →
channel: Google search ad headline
```

RESULT

- 103 characters; Google search ad headline allows 30 (73 over).
- Disclaimer “Prices need terms”: Add one of: 'T&C apply', 'terms and conditions apply', '*conditions apply'.

INPUT 2

Example file: `inputs/11_channel_check/channel_01_instagram.json`

```
Every unit includes a 2-Year On-Site Limited Hardware Warranty. The NovaCore N10 AI Engine delivers 45 TOPS of
sustained AI performance. Backed by NovaTech serv…   →  Instagram post, image 1080×1350
```

RESULT

234 of 2200 characters, image shape allowed.

Why you get this result

- A Google ad headline allows 30 characters; this text has 103.
- Text that shows a price must carry a terms line such as “T&C apply” in this region (set in Settings → Channels & disclaimers).

17. Find fake sites and scams (Risk Radar → Brand Fraud Intelligence)

1. Open **Risk Radar → Brand Fraud Intelligence**.
2. Administrator: add your real website under **Official domains** (for the demo: novatech.example).
3. Paste a reported link and/or the message text, attach a screenshot if you have one, and click **Investigate**.
4. An incident is opened with a risk level, the signals found and what to do. A Reviewer updates its status (Confirmed, False Positive…).
5. **Look-alike domain watch** (same page): click **Search now** to search public certificate records for new websites named like yours. It also runs once a day.

INPUT

Example file: `inputs/10_fraud_intelligence/report_02.txt`

```
Link: https://n0vatech.shop/offer
Message: NovaTech official sale! NovaBook AI Pro 16 for ₹29,999. Pay now to reserve.
```

RESULT: HIGH RISK (95%)

- high Look-alike characters imitate novatech.example
- high Brand name “nova” used in an unofficial domain
- low Extension .shop is common in scam sites
- high Offer price ₹29,999 is not an approved price
- medium Not found in approved campaign records

What to do: Treat as suspected impersonation: preserve the evidence, warn customers through official channels, and report the domain or page to the registrar / platform after a person confirms it.

INPUT 2

Example file: `inputs/10_fraud_intelligence/report_01.txt`

```
Link: https://novatech.example/novabook-ai-pro-16
Message: The NovaBook AI Pro 16 is available at ₹79,999 with a 2-year warranty.
```

RESULT: LOW RISK

Low signal. Keep for reference; no action unless more reports arrive.

Why you get this result

- “n0vatech” uses a zero in place of the letter o to imitate novatech.example.
- ₹29,999 is not an approved price and the message pushes for payment.
- Input 2 is on the official domain with the approved price, so the risk is low.
- Findings stay “suspected” until a person confirms them.

18. Watch customer feedback (Risk Radar → Reputation)

1. Open **Risk Radar → Reputation**.
2. Click **Upload CSV / JSON** and choose an export of reviews, tickets or survey answers.
3. See positive, negative and neutral trends and the topics people complain about.

INPUT

Example file: `inputs/09_reputation_feedback/feedback_01_flipkart_reviews.csv`

```
Flipkart reviews export (CSV)
```

RESULT

98 rows imported, 0 skipped.

Why you get this result

- Star ratings decide the feeling when present; text without a rating is scored by the AI (or by word lists if no AI key).
- Rows without usable text are skipped and counted, never guessed.

19. Check logo misuse (Visual DNA → Asset Forensics)

1. Open **Visual DNA → Asset Forensics**.
2. Register your official logo first: type its name, choose the file and click **Upload as approved** (for the demo: `12_asset_forensics/00_official_logo_REGISTER_FIRST.png`).
3. Then click **Choose an image** and pick an image where the logo is used. BrandVault finds the logo and measures what was changed.

INPUT 1

Example file: `inputs/12_asset_forensics/asset_02_rotated.jpg`

```
Image with the logo turned
```

RESULT

Best match: NOVA TECH logo v2 (logo rotated). — Logo rotated: -14.8° from upright

INPUT 2

Example file: `inputs/12_asset_forensics/asset_03_recoloured.jpg`

```
Image with the logo in other colours
```

RESULT

Best match: NOVA TECH logo v2 (logo colours changed). — Logo colours changed: median colour difference ΔE 118.1 (visible above ~12)

Why you get this result

- The brand guideline says never rotate or recolour the logo; BrandVault measures the angle and the colour difference.

20. Settings — team, security and your data

Tab	What you can do
Workspace	See which engines are on (database, OCR, search model) and set the logo clear space.
Team	Invite people by email with a role; change roles; turn access off; unlock a locked account.
Security	Turn on two-step sign-in with an authenticator app; change password; sign out everywhere; read the security log (Administrators).
Data & privacy	Download everything as a ZIP; close your account; delete the whole workspace (cannot be undone).
System	Requests, errors, response times, and the AI providers in use (Administrators).
Channels & disclaimers	Character limits, image shapes and required wording per channel.
Notifications	Browser, Slack and email alerts for reviews and incidents.
API keys / Webhooks / MCP	Connect other tools (a CMS, Slack, an AI agent) to BrandVault.

21. If something goes wrong

You see	Why	What to do
Page loads slowly the first time	The free server sleeps outside 9 AM – 8:30 PM IST and needs about a minute to wake up	Wait and refresh
“Failed to fetch”	The server could not be reached (waking up or restarting)	Wait 1–2 minutes and try again
“Couldn't load …” banner on the dashboard	One part of the data did not load	Click **Try again**
“This image needed more memory than this server has”	The image is very large for the free server	Use an image under 1600 pixels on its longer side
“Account is locked”	5 wrong passwords or codes in a row	Wait 15 minutes or ask an Administrator to unlock it
Colour is not checked in Visual DNA	No confirmed palette rule	Add and confirm a palette rule in Brand DNA Studio

22. Where the example files are

Feature	Folder in `inputs/`
Content Intelligence	01_content_intelligence (110 texts)
ClaimDNA	02_claim_dna (63)
Creative Inspection	03_creative_inspection (banners, PDFs, videos)
Visual DNA	04_visual_dna (60 images)
Brand DNA upload	05_brand_dna_guidelines (70)
Translation Guard	06_translation_guard (75)
AI Copy Studio	07_copy_studio (60)
Brand Assistant	08_brand_assistant (60 questions)
Reputation	09_reputation_feedback (55)
Fraud Intelligence	10_fraud_intelligence (60)
Publishing Gate	11_channel_check (60)
Asset Forensics	12_asset_forensics (55)
Brand Passport verify	13_brand_passport_verify (55)
Similarity	14_similarity (52)

Each folder has a `manifest.csv` that lists what every file should trigger.
